

Save a drop. Save a lot.

Conserve water at home!

Tip #1

As much as you love those long bubble baths, don't overfill. Try filling the tub less than half full, or better yet, save water by taking a short shower instead.

Tip #2

When you want a drink, don't let the water run until it is cold. Instead, refrigerate a jug of tap water. Cold and refreshing! Add fresh fruit for an even better treat.

Tip #3

When it's time to do the dishes, don't pre-rinse before putting them in the dishwasher and only run it when it's fully loaded. Now, you are saving water and just imagine all the time you will have for other things.

We can all do our part to conserve water.

Save it! Don't spray it!

Conserve water in your backyard!

Tip #1

When mowing your lawn, only cut the top 1/3 and leave the grass clippings behind. This will help retain moisture and saves you from having to dump that heavy bag all the time.

Tip #2

Don't water your lawn during the hottest time of the day. Instead, water early in the morning or in the evening. This saves water and the best part of the day to go do other fun things.

Tip #3

Time to wash the car. Try doing it at home. Use a shut-off nozzle or a pail and a sponge. Not only will it save water, it will look really impressive to the rest of the neighbourhood.
