

# Immerse yourself.

## Our services

## LET'S CHAT.

Considering your water or wastewater system needs? Make it simple with a call to SaskWater. We have the answers.

- Potable Water Supply
- Non-potable Water Supply
- Certified Operation and Maintenance
- Wastewater Treatment and Management
- Project Management

### Clean, clear drinking water for every resident

Ensure your community continues to grow and thrive. SaskWater's potable water services deliver safe and reliable drinking water to municipalities, First Nations, rural pipeline groups and businesses. SaskWater's non-potable supply supports communities that own water treatment facilities, and manage the treatment process and distribution to their residents.

### Water for industrial purposes

Trust us to construct, manage and maintain your water supply while you focus on the success of your core business. SaskWater's non-potable water supply is delivered in large volumes to industrial customers including potash mines and fertilizer manufacturers.

### We know water

We can support you without owning your system. SaskWater's certified operation and maintenance service provides you with the expertise you need to maintain your water and wastewater infrastructure. We also provide regulatory reporting and consultation, emergency planning and customer support services.

### Sustainable wastewater solutions

Simple lagoon-based treatments. Complex mechanical treatment systems. Effluent irrigation onto a woodlot. There's always a solution, and SaskWater's wastewater treatment and management services always aim for zero discharge to the environment.

### From start to finish

It may be the conceptual design and environmental assessment for a regional water supply system. Or maybe it's the design and construction of a new water or wastewater treatment plant. Whatever the project, SaskWater provides complete project management services – from planning and design, to construction and financing, to operation and maintenance – for water infrastructure projects.

## HOW CAN WE HELP?

We're more than a water utility. A partnership with SaskWater brings added value.

- Regional solutions with neighbouring communities
- Unmatched expertise and service
- In-house engineering
- Asset management tips and advice
- Access to capital and grant funding
- 24/7 monitoring for peace of mind

### Pooling regional resources

Want water that's as good as it is down the road? SaskWater's existing and well-maintained infrastructure allows for efficient and cost-effective regional solutions for municipalities and First Nations. SaskWater can also provide the support and expertise to explore new regional solutions that reduce the long-term capital needs and operating costs for all communities involved.

### We've got you covered

SaskWater's operations team holds diverse levels of certification for water and wastewater systems, helping to optimize infrastructure design and operations. Our broad base of knowledge results in early problem diagnosis and troubleshooting. And our trained relief operators are available to cover leaves and vacancies.

### An expandable team

With SaskWater, you have access to mechanical, chemical and civil engineers with experience related to water and wastewater challenges. Our engineering team provides flexible solutions and project management services to meet the unique needs of customers from concept through to construction.

### Prioritizing the future

Focus your dollars in other areas beneficial to your business or community. SaskWater uses a comprehensive asset management program, which helps our customers invest and plan for the future.

### Accessing support

Additional financial support is out there. SaskWater has the ability to invest in water and wastewater systems and provides grant application assistance, enhancing our customers' ability to access capital funding and municipal grants.

### Keeping you safe

Around the clock remote monitoring gives you peace of mind that your community's water supply is safe and reliable. SaskWater's knowledge of Saskatchewan's regulatory requirements and our operational expertise ensures permit requirements and quality standards are met.
